(212) 481-1219

New York's new Gianna Center for Women offers effective treatment for infertility and recurrent miscarriage using NaPro Technology, an alternative to in vitro fertilization. The Gianna approach is completely in line with Catholic Church teaching and allows a couple to conceive naturally, with success rates which are comparable to other methods. The Gianna Center also offers pro-life obstetrics, gynecology and general medical care for women.

### NaPro Technology (TM)

- More than 30 years of research into the underlying causes of infertility have made it possible for NaPro Technology (TM) physicians to diagnose and treat many of the conditions which cause infertility, with success rates comparable to IVF (in vitro fertilization).\*
- Married couples conceive through a natural act.
- Embryos are not created or destroyed in the process.
- The underlying causes of infertility are corrected, leading to improved overall health for the woman.

Dr. Anne Mielnik is the Founder and Director of Gianna - The Catholic Healthcare Center for Women. She is a family physician who completed an area of concentration in women's health and infertility. She provides general gynecological care, well-woman exams, and NaPro Technology (TM) medical consultations, as well as general medical care for women of all ages.

Dr. Kyle Beiter is an obstetrician and gynecologist. He is one of only a handful of fellowship-trained NaPro Technology (TM) surgeons in the United States with special training in pelvic reconstructive surgery which forms the cornerstone of the NaPro Technology(TM) approach to infertility. Dr. Beiter provides full-spectrum gynecology, as well as NaPro Technology (TM) medical and surgical consultations.
